PROJECTS / OPEN-SOURCE

UPI Fraud Detection System

Machine Learning

- Developed a machine learning-based system to detect fraudulent transactions in real-time for Unified Payments Interface (UPI).
- Collected and preprocessed transaction data including user behavior, transaction amount, frequency, and location patterns.
- Applied anomaly detection techniques to flag unusual transaction patterns and reduce fraud risk. Performed feature engineering to improve model accuracy and minimize false positives.

Jarvis The Virtual Assistant

Artificial Intelligence

- Developed a voice-enabled virtual assistant inspired by J.A.R.V.I.S. to automate daily user tasks.
- Implemented speech recognition to process real-time voice commands and convert them into executable actions.
- Integrated text-to-speech engine to generate human-like audio responses for interactive communication.
